DETAILED ACTION

Specification

1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Drawings

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid

abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claims 1-13 are objected to because of the following informalities: claim 1, line 8, " shouldn't "a" be deleted?

claim 2 please expand "ATSC".

claim 4, "pre-determined needs to be deleted so as to be consistent with antecedent in claim 1. similar comment applies to similar limitation recited in claim 5, line 4, line 8 and line 13.

claim 6, "pre-determined" needs to be deleted so as to be consistent with antecedent in claim 5. in addition, please expand "ATSC".

claim 7, "pre-determined" needs to be deleted so as to be consistent with antecedent in claim 6.

claim 8, line 3, shouldn't "am" be deleted?

claim 9, line 2, please expand "ATSC". The same comment applies to claim 11.

as per claim 12, please expand "VSB". in addition, shouldn't "like" be deleted as recited in line 1? Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1, the limitation "statistics of an output signal" recited in line 3, renders the claim vague and indefinite, because the scope of such limitation can not be determined. Similar comment applies to similar limitation recited in line 5.

as per claim 5, the limitation "a standard trellis encoder", recited in lines 5-6 is vague and indefinite as there is an unclear antecedent in line 3.

As per claim 8, with respect to the limitation "statistics of the output signal", see claim 1. in addition, "the output signal" lacks of proper antecedent basis. In addition, the limitation "standard signal" is vague and indefinite because it is unclear as what would be considered as a "standard signal".

As per claim 12, line 8, the limitation "statistics of an encoded/mapped stream output" renders the claim vague and indefinite, because the scope of such limitation can not be determined. Similar comment applies to similar limitation recited in line 9.

note that any claim whose base claim is rejected is likewise rejected.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 8 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Strolle et al US Patent 7,194,047.

As per claim 8, Strolle et al discloses a method and apparatus fig. 1 and fig. 2 comprising provided a multiplexed (hierarchical packet) stream of at least on standard (normal) and at least one robust (high priority) symbol, see fig. 2; modulating said stream in modulator 28 using multiple modulation types see for instance col. 3, lines 24-63 such that the modulus of the symbol set for robust data is the same as the 8-VSB signal (statistics of the output signal look like a standard signal).

As per claim 8, the signal is transmitted as an ATSC signal see col. 2, line 65.
